Guarantee

WE GUARANTEE all nursery stock we sell to be true to name; nevertheless, it is mutually understood and agreed that should any stock prove untrue to name, the nursery shall refund purchase price or replace free, at the option of purchaser, and shall in no case be further responsible.

Conditions governing life of stock after shipping is beyond our control, so we make no guarantee as to life of plants we sell; however, in accordance with the policy recommended by the Washington State Nurserymen's Association, replacements will be made at half-price on any items that fail to grow by July 1st following planting, through no fault of customer—no adjustment after lapse of that period.

SHIPPING SEASON — Our shipping season begins about November 1, and continues until late spring. Where planting conditions are favorable, and if customer requests, we can make shipments in mid-winter.

WE PAY POSTAGE on all orders that can be shipped Parcel Post, in the State of Washington. On all out of State shipments Please add 15% to price of order to cover cost of Postage. All Trees will be pruned back to meet Parcel Post regulations.

All commercial Fruit Tree orders, all Shade Tree orders and all Evergreens will be shipped Auto Freight or Express, collect.

SALES TAX — If you live in the State of Washington add 3 1/3 per cent sales tax.

NECTARINES

Quetta—Large, yellow green, rich, delightful aroma, excellent quality.

Gold Mine—Large, red and yellow fruits, flesh juicy, white. Excellent in flavor and quality. Produces abundantly.

Stanwick — Extremely large fruit, skin colored purplish-red, flesh white and juicy, very sweet.

PEACHES

Dixie Red — (Semi Cling) New early Peach with a very good red color, ripens about Redhaven time. Very promising fresh fruit variety.

Redhaven—The best new early Peach we have seen in a good many years; ripens about 30 days ahead of Elberta, golden flesh, fine grained, highly flavored. It colors very early to an almost solid brilliant red; hardy; heavy bearer.

***Golden Jubilee (Freestone)**—Is similar to Elberta in tree habit and form and appearance of fruit. Good bearer. Hardy. Excellent canning peach. Three weeks before Elberta.

***Rochester**—Very hardy, thrifty grower. Medium size, deep yellow and red, excellent quality. Especially good west of the Cascade mountains. Three weeks before Elberta.

***Halehaven (Freestone)**—Eighteen days before Elberta. Resembles Hale in appearance, colors highly on the tree several days before it is ripe. Hardy, heavy bearer, fine flavor. Good shipper. The best early Peach of all.

***Veteran**—One of the new Peaches that is particularly adapted to the climate west of the Cascades. Fruit very uniform in size, yellow flesh; a very high quality Peach for both canning and eating.

Slappy (Freestone)—Yellow, high quality, hardy, excellent canning Peach.

Early Elberta (Freestone)—Large, golden yellow, excellent quality, good shipper, and good canner.

PEACHES (Continued)

- Elberta (Freestone)**—Best market and canning Peach ever produced.
- J. H. Hale (Freestone)**—Surpasses Elberta in size and color. Ranks next to Elberta as a commercial Peach.
- Gold Medal (Freestone)** — Very good quality. Flesh deep yellow, firm and sweet, large size. Golden yellow. Dessert, canning, market Peach. Hardy. Ripens just after Elberta. Very productive.

PLANTING INSTRUCTIONS

GENERAL

DO NOT use commercial fertilizer or barn-yard manure in such a manner that it comes in contact with roots.

DO NOT expose roots to air.

It is beneficial to the trees or plants to immerse the roots in water before planting. Many failures of newly transplanted stock are due to lack of proper pruning. Follow pruning instructions given for each class of nursery stock. The holes for planting must be large enough to receive the roots freely without bending them from their natural position. All broken or mutilated portions of the roots should be cut off so as to leave the ends smooth. All trees and plants should be planted two inches deeper than they stood in the nursery row; pack the soil firmly about the roots by tamping with the feet, being careful not to bark or break the roots. Leave three inches of the surface soil loose to serve as a mulch. If the ground is very dry, apply one or two pails of water before this soil mulch is in place and after the water has soaked away it can then be placed over the moist soil.

FRUIT TREES. Follow general planting instructions.

Branched. Select three or four of the best side branches, well-spaced so as to balance the tree. Prune these back one-third and cut off all other branches close to the trunk.

Whips (without branches). Trees having no side branches, cut off top just above a bud 24 to 36 inches from the ground.

SHADE TREES. Follow general planting instructions. Shade trees having a heavy top, at least one-third of the top area should be removed. Prune to avoid crowding the branches. Cut out some of the smaller branches and shorten back the side branches, but do not cut off the leader or main stem.

ROSES. Follow general planting instructions. Be sure that the bud is two inches below the ground. If the soil is dry, it is well to plant the rose solidly, then wet thoroughly and after the water has soaked away, throw up a small mound of earth five or six inches high around the plant. Then cut off the branches one inch above the mound, leaving it this way for ten days or two weeks, or until the buds start and show a desire to grow, when the dirt mound can be raked down. Roses handled in this manner seldom fail to make a good start and a very satisfactory growth.

RASPBERRIES, BLACKBERRIES, YOUNG-BERRIES, LOGANBERRIES, BOYSENBERRIES and DEWBERRIES. Follow general planting
